Lake George Stormwater Improvement Project; Village of Lake George, NY

A Project Partnership Agreement (PPA) was executed in partnership with the Village of Lake George, New York. The project consisted of design/construction of storm-water infiltration structures in the Beach Road Parking lot in the Village of Lake George, NY. A “storm-water infiltration chamber” was constructed within the parking area, which intercepts the flow on the parking lot and provides subsurface run-off storage and infiltration capability. **The project is complete.**

Project Manager: Jason Shea, Planning Division
Total Cost: $282,000

Water Treatment Control Plant Phosphorous Reduction Planning Study; City of Plattsburgh, NY

A PPA was executed in partnership with the City of Plattsburgh, NY. The study addresses phosphorus removal by generating a planning study which recommends more efficient phosphorus removal at the City Water Pollution Control Plant (WPCP). A contract was awarded in March 2007 for the Planning/Design work. The Report is complete which includes 30% level of designs of the recommended plan. **The study is complete.**

Project Manager: Jason Shea, Planning Division
Total Cost: $538,000

Potash Brook River Restoration Project; City of South Burlington, VT

A PPA was executed in partnership with the City of South Burlington, VT. The project consists of the design of urban watershed restoration measures in a crucial reach of “Tributary 3” of Potash Brook. USACE participation in the project was suspended prior to final design and construction due to federal delays in signing a cost sharing agreement for construction. **The non-federal sponsor decided to proceed to construction without the USACE participation and the project is complete.**

Project Manager: Mark Lulka, Programs & Project Management
Total Cost: $1,800,000
(Design $425,000 / Construction $1,375,000)
Total Spent Federal: $38,000
Bartlett Brook Stormwater Management Project, City of South Burlington, VT

A PPA was executed in partnership with the City of South Burlington, VT. The Project will reduce the negative impact of stormwater runoff to the receiving waters and manage flooding by upgrading failing drainage infrastructure in two suburban neighborhoods. Construction work includes drainage swales and grass channels, a bioretention area, infiltration trenches, wetland ponds, and a closed drainage system (larger pipes and catch basins). **Under construction, with completion in September 2017.**

**Project Manager:** Rifat Salim, Programs & Project Management
**Cost Estimate:** $1,980,400

Lake Champlain Canal Barrier Feasibility Study, Fort Edwards (Lock C7) and Smith Basin (Lock C8), NY

The Lake Champlain Canal Barrier Feasibility Study will inventory potential hydrologic barriers to prevent the spread of aquatic invasive species through the Champlain Canal. The study will conduct a cost benefits analysis of selected alternatives, and select a preferred alternative based on the analysis and support of project partners. **Study initiation is expected in FY 17.**

**Project Manager:** Mark Lulka, Programs & Project Management
**Cost Estimate:** $570,000
